WELCOME

Welcome to our very first online Bidr In-Fawn Hind sale! We are extremely excited to bring you a very strong selection of top Hinds with great Velvet pedigrees. These young hinds not only hold great pedigrees themselves, but are also in-fawn to our latest and greatest Sires!

The Sires that these hinds are in-fawn to have all produced competition style velvet heads with great beam and style. All Sires used at Forest Road Farm not only have great velvet style; they also have to be big bodied with good constitution and have a good temperament!

We are a few years in of utilizing Deer Select and it is enabling us to deliver another layer of information to our clients, so that they can trust that what they are investing in is going to make improvements in the overall genetic performance of their own herd in both Velvet and Venison.

This last season has been a hard push, with velvet pricing no where close to where it needs to be. But its now more than ever that we have to focus in on breeding well and breeding efficiently so that every mouth counts and is performing at a high level! We believe the future for Velvet is bright and also believe that production efficiency should be a major focus, whatever stage of a cycle we are in!

We feel we are at a very exciting stage to be able to offer in-fawn hinds of this caliber to market!

Please note that some of these hinds have 5mth weights and some have 12mth weights (due to not weighing after Cyclone etc)... All hinds will have an updated liveweight prior to sale day!

Thanks for your ongoing support

Grant & Sally Charteris

FOREST ROAD FARM

— NZ RED DEER —

www.forestroadfarm.co.nz

Welcome to Deer Select: we're onto it.

We're pleased to be able to add Deer Select data to the catalogue for the first time this year, which should help your purchasing decisions. At Forest Road Farm we have literally decades of deer production data, so it was a simple job to get that uploaded into Deer Select and have generations of our deer data analysed. The amount of back-data we provided ensured strong accuracy in the results and can be relied on to help inform our breeding decisions and yours as well.

These numbers reflect an animal's performance within our herd, and the strength in this data will increase as we build linkages with other stud and commercial herds, which allows Deer Select to compare the performance of genetics in different environments. We have already sold sires to commercial herds using Deer Select, which will provide some of those linkages.

Our AI programme will inevitably create more linkages, especially as more herds join Deer Select.

Without going into too much detail, the key information we've added to the catalogue for your consideration is a Mature Velvet Weight breeding value (MVW) and a Weight 12 breeding value (W12). There are layers of information in these numbers that connect generations of deer.

- **Velvet:** the MVW BV is a measure of how well this stag and his offspring will perform compared to the average animal within our herd. A stag with a MVW of 3.00kg is three kilograms of velvet ahead of the average stag. Mated to an "average" hind, his sons would be 1.5kg heavier than average... and he'd pass those same genetics to his daughters. That benefit is a permanent improvement for your herd.
- **Bodyweight and growth:** we have used bodyweight data to generate the W12 BVs as well. This is a continued focus for us, creating added value for stock by ensuring bodyweight and carcase weight are reflected in strong venison returns for you as well. Not every animal gets to make the velvet herd or the breeding mobs, so ensuring good growth rates and respectable carcase weights for those animals adds greatly to the bottom line. Nearly all the stags on offer this year have good positive growth rates, so they are truly all-rounders for commercial operations.
